**TO WHOM IT MAY CONCERN SUBJECT: NOTIFICATION OF PARTNERSHIP**

Dear Customers and Partners,

Since our inception, EQUIUM has been committed to pushing the boundaries of thermodynamics to provide sustainable and impactful alternatives to the world. We have developed EQORE — The world's only Stirling Acoustic Heat Pump, The new "EV" for HVAC: no compressor, no refrigerant, no wear parts and able to run with no phase change very high delta T from -110°C to +130°C.

Today, we are proud to announce a new partnership with ARTIC INDUSTRIE to simplify the ULT supply with one device only instead of MVC cascade with a better efficiency and robustness.

We are pleased to inform you that EQUIUM and its CEO, Cédric François, have signed a mutual cooperation agreement with ARTIC INDUSTRIE and its CEO Laurent Pépin for the future development of acoustic Ultra Low temperature solutions. The objective of this strategic alliance is to deploy our acoustic Stirling technology for ULT (Ultra Low Temp) applications (agrifood applications, microprocessor processes, pharmaceutical industry)

As part of this collaboration, EQUIUM and ARTIC INDUSTRIE will jointly test our natural refrigerant solution using helium (GWP 0 with no phase change) at ARTIC's facilities in France. Our first product has been designed to provide 6 kW of cooling capacity, operating within a temperature range of -80°C to -90°C on the cold side and +40°C to +50°C on the hot side.

We will then together intend to promote and market this innovative french solution throughout Europe and Africa via the international distribution network.

We are confident that this partnership will further strengthen and showcase French technological expertise while supporting the continued development of innovative and sustainable refrigeration solutions.

best regards,  
**Cédric FRANÇOIS**  
EQUIUM Founder and CEO
